Continuation of 11. does NOT place the application in condition for allowance because: the applicant's arguments are not persuasive. The applicant primarily argues that Paton does not show the silicate layer in the embodiment of figure 4A-4B and therefore does not show all of the elements of the claims. The examiner believes that Paton discloses the elements of the claims. Specifically, Paton discloses (col. 10, lines 1-3) that "the high-K dielectric material includes . . . silicates of one or more of ZrO, HfO, AlO, YO, LaO." References number 108 in the drawings is the high-K dielectric. Paton also discloses (col. 11, lines 11-21) the process that forms the silicate. In essence, any of the embodiments shown by figures 4B and figure 5B, which are two separate final structures, may have the silicate high-K layer. The embodiment of figure 4B keeps the silicon oxide layer 118 while the embodiment of figure 5B eliminates the silicon oxide layer. However, in both embodiments, the high-K dielectric layer 108 is present and Paton states that the high-K dielectric layer is a silicate (col. 10, lines 1-3). Therefore, Paton shows the elements in question and the final rejection shall remain.
